Application/Control Number: 10/650,467

Art Unit: 1649

Claims 56 to 76 are the only claims pending in the instant application.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 56 to 67, drawn to a receptor-spe4cdific binding assay, classified in class 436, subclass 501.
- II. Claim 68, drawn to an isolated protein, classified in class 530, subclass 350.
- III. Claims 69 to 76, drawn to an isolated polynucleotide encoding a receptor protein, and a vector and host cell comprising that polynucleotide, classified in class 435, subclass 252.3.

The inventions are distinct, each from the other because of the following reasons: Inventions II and III are each related to invention I as product and process of use.

The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the method as claimed can be practiced with either a cell naturally expressing the recited protein, a recombinant cell expressing that protein or with an isolated protein preparation, each of which is a materially different product. Further, the isolated polypeptide of invention II can be employed to detect related polynucleotides in a sample and the isolated protein of invention III can be employed as an immunogen for the production of antibodies thereto, both of which are processes that are clearly materially different from the assay of invention I.

Application/Control Number: 10/650,467

Art Unit: 1649

The protein that defines invention II and the polynucleotide that defines invention III are patentably distinct and chemically unrelated compounds that do not reflect a common inventive concept. These two different compounds lack a common utility that is based upon a shared structural feature that distinguishes them as a group from the prior art and each of these compounds can be made and used without the other.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper..

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Application/Control Number: 10/650,467

Art Unit: 1649

Page 4

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John D. Ulm whose telephone number is (571) 272-0880. The examiner can normally be reached on 9:00AM to 5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Janet Andres can be reached on (571) 272-0867. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
